

DIABETES

Control Your Cholesterol

DIABETES

800.414.6314

Your blood has both HDL and LDL cholesterol. You should have healthy cholesterol levels.

LDL, or 'bad' cholesterol, can stick to blood vessel walls. When blood flow becomes completely blocked, a heart attack or stroke can occur.

HDL, or 'good' cholesterol, helps carry cholesterol from the blood vessels to your liver where it is sent out of the body.

Many people with diabetes have problems with their cholesterol and should have it tested. If you have never been tested, ask your doctor to test you. If you have been tested, ask your doctor about the results.

fish	

Sometimes, lifestyle changes can help you control your cholesterol. Your doctor can order medicines to help, too. Your doctor will work with you to make a treatment plan that works best for you. Here are some tips to help you make healthy choices.

- Know your cholesterol level.
- Keep your blood sugar levels on target.
- Keep your weight at a healthy range.
- Avoid smoking.
- Exercise - talk to your doctor before starting.
